EDUCATION

Bachelor of Science: Software Engineering, Dec 2021 **Kennesaw State University** - Marietta, GA

Certificate Of Completion: Software Engineering Bootcamp, Feb 2022 - Mar 2023 **Cogent University** - Remote

SKILLS

- Programming Language: Java, C#
 - Frameworks: JUnit, Spring Boot, Spring Framework, Hibernate
 - Version Control Tools: GIT
 - Databases: SQL, PL/SQL, MySQL, PostgreSQL
 - Cloud Technologies: AWS, Dockers
 - Web Technologies: HTML, CSS, JavaScript, TypeScript, Angular 11, React Native
-

WORK HISTORY

Application Developer, Jun 2022 - Jul 2023

Yellow Corporation – Overland Park, KS

- Revamped M204/COBOL program/job streams into Java as a key contributor to the Modernization project, skillfully leveraging Spring Batch to enhance performance by 50%.
- Demonstrated proficiency in Spring/Spring Boot, Github, Maven, SQL, Java Technologies.
- Played a key role in a dynamic SCRUM team, coding, testing, and deploying applications that consistently met project milestones.
- Provided top-notch technical support and managed on-call rotation to address application issues promptly, reducing downtime by 20%.
- Streamlined development processes and enhanced code management through effective use of GIT and Kibana.
- Developed 30+ robust batch applications using Spring Batch and a POJO-based development approach, improving maintainability and scalability by 30%.
- Fostered a collaborative environment with fellow developers, leading to more accurate interpretation of business requirements and higher code quality through comprehensive code reviews.

Programmer Analyst Assistant, Feb 2019 - Aug 2021

2020 Group LLC – Atlanta, GA

- Conducted thorough analysis of applications to ensure alignment with specifications and technical requirements, contributing to informed decision-making.
 - Implemented RESTful services in Java and Spring Boot, enhancing API performance by 20%.
 - Successfully optimized the supply chain management production system in a Java role reducing processing time by 20% and aligning it with the end to end SDLC, leading to improved productivity and customer satisfaction.
 - Showcased expertise in Java and Spring frameworks, managing database systems using SQL and PL/SQL.
 - Resolved various technical issues related to application interfaces, workflow, reporting, and data integrity, ensuring seamless operations.
-

PROJECT

Bank Management System

- Developed a system that automates transactions and monitors activities within a bank institution, improving efficiency by 30%.
- Utilized Java8, MySQL, Spring Boot, Date JPA, Spring Security - JWT, Apache Tomcat, HTML, CSS, TypeScript, and Angular 11 to build a robust and scalable application.
- Implemented features that automatically update records based on transaction information, eliminating the need for manual processing.

Music Player Application

- Integrated Spotify API into a custom music player web application, enhancing the user experience and providing access to a vast library of songs.
- Utilized Java8, MySQL, Spring Boot, Date JPA, Spring Security - JWT, Apache Tomcat, HTML, CSS, TypeScript, and Angular 11 to build a robust and scalable application.
